# Top Quality

*Waterborne primer  
for carpentry*

**YM S012**

# The waterborne wood preserve primer for carpentry

Thanks to its innovative waterborne modified oil resin formulation, YM S012 allows an excellent protection of the wood. In fact, moulds and fungi can attack the logs during stocking period. Applying this preserve primer prevents the damages of these biological agents before the use.

## The protection of the wood during construction

YM S012 is an excellent penetrating protective undercoat for timbers, dimensional laminated lumber and engineered wood components. This product provides dimensional stability, water repellence and wood protection from UV degradation and moisture absorption. It reduces fiber swelling and wood rot.

## Main advantages

- H<sub>2</sub>O product
- Low VOC
- Biological agents protection
- UV protection
- High absorption into the substrate
- Application by brush, dipping or flow-line
- Reduction of in situ preparation
- Water repellant
- Weathering resistant
